CCCS 106: Application Development and Emerging Technologies (AY 2026-2027)

LABORATORY TASK REPORT 01

Environment Isolation, Modern Flet GUI & Collaborative 3-Developer Git Workflow

Group Designation:	Group No. [2] (Ni-Git)
Date of Submission:	[September 10, 2026]
Course Instructor:	Engr. Allan Ibo Jr. CSPC College of Computer Studies

TEAM TRIAD MEMBERS & TECHNICAL ROLES

Student Full Name	Student ID	GitHub Username	Assigned Triad Role & Branch
[Borja, Edmar B.]	2411445	@edborja	Developer 1 (Lead UI) feature/dev1-profile
[Barandon, Noelee Anthony S.]	2412863	@nonoelee-ui	Developer 2 (State Logic) feature/dev2-state
[Musa, Eduardo Gabriel S.]	2411276	@mimitzkii	Developer 3 (QA & Milestone) feature/dev3-features

Section 1: GitHub Repository & Collaborator Proof

Public GitHub Repository URL: <https://github.com/edborja/Laboratory-Task-Professional-Development-Environment-Setup-Collaborative-Git-Workflow.git>

Proof of team collaboration setup on GitHub. The screenshot below shows the repository Settings > Collaborators page confirming that Developer 1 has invited Developer 2 and Developer 3 as official contributors with accepted statuses.

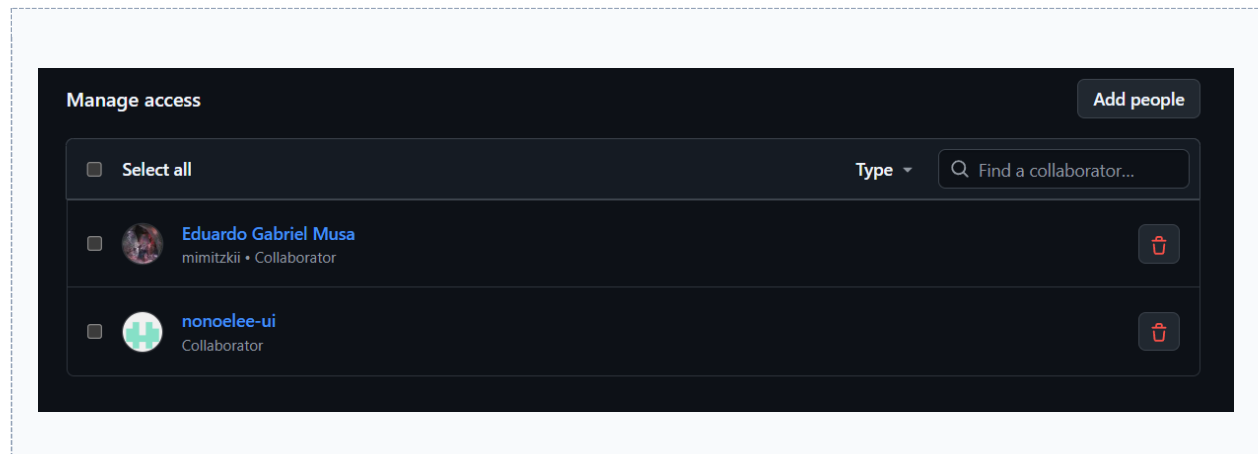

Figure 1: GitHub Collaborators Verification (Settings > Collaborators)

Section 2: Automated Pre-Flight Diagnostics Audit

Pre-flight workstation audit executed via 'python verify_setup.py' inside the active virtual environment (.venv). All six (6) audit checks must report [PASS] verifying Python 3.10+, virtualenv isolation, Flet SDK v0.86.5+, Git binary detection, configured institutional user identity, and .gitignore hygiene.

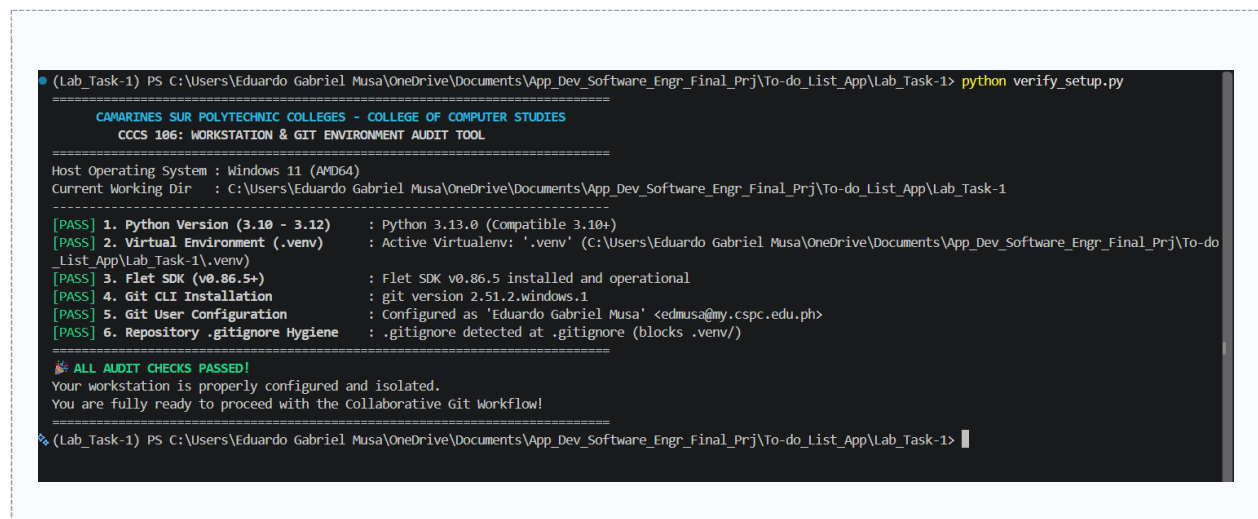

Figure 2: Pre-flight Environment Diagnostics Audit (verify_setup.py)

Section 3: Git Working Tree Cleanliness & .gitignore Audit

Demonstration of repository hygiene. The screenshot proves that the working tree is clean with zero uncommitted changes, and that .venv/ is completely untracked (verified by running 'git ls-files .venv', returning empty output).

```
(Lab_Task-1) PS C:\Users\Eduardo Gabriel Musa\OneDrive\Documents\App_Dev_Software_Engr_Final_Prj\To-do_List_App\Lab_Task-1> git ls-files .venv  
(Lab_Task-1) PS C:\Users\Eduardo Gabriel Musa\OneDrive\Documents\App_Dev_Software_Engr_Final_Prj\To-do_List_App\Lab_Task-1>
```

Figure 3: Git Working Tree Cleanliness & .gitignore Hygiene Proof

Section 4: Running Flet v0.86.5 Application Showcase

Desktop window screenshots demonstrating the running collaborative Flet GUI application across its three core interactive states: Initial Launch, Sprint Goal Milestone Reached, and Dark Mode theme toggle.

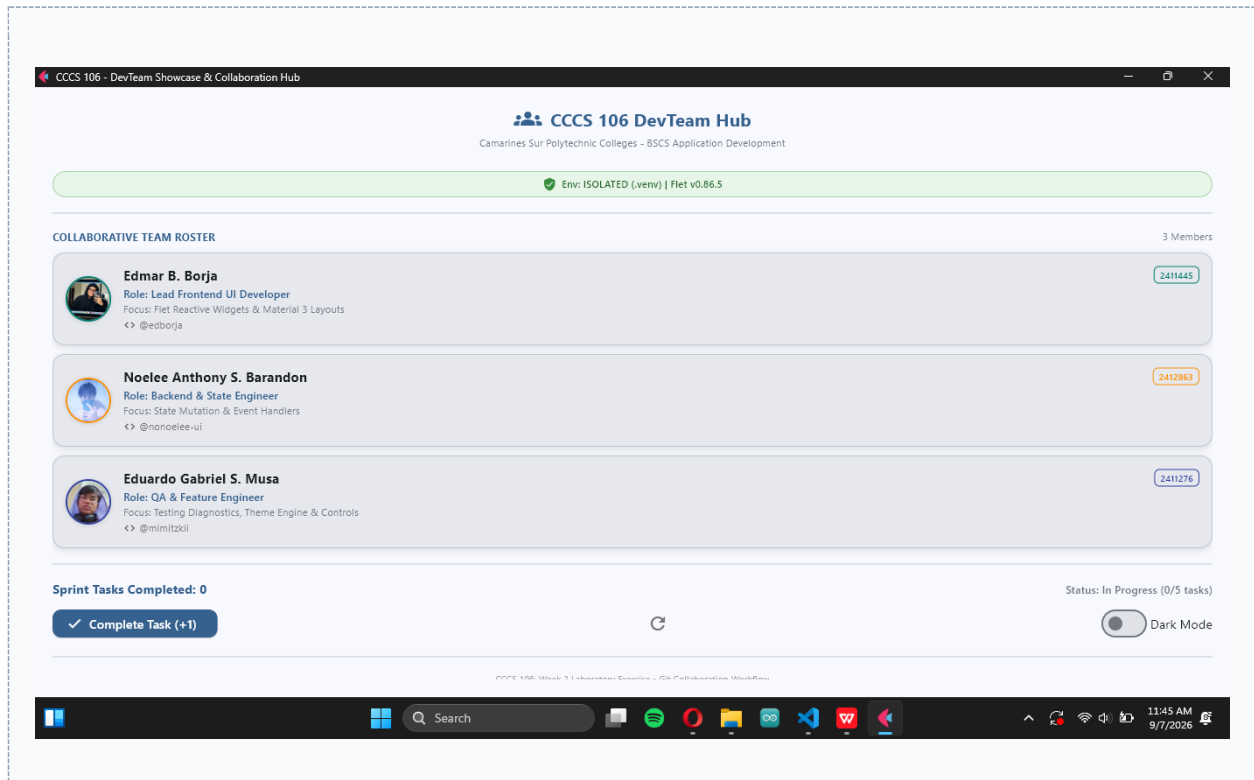

Figure 4: Application Initial Launch State

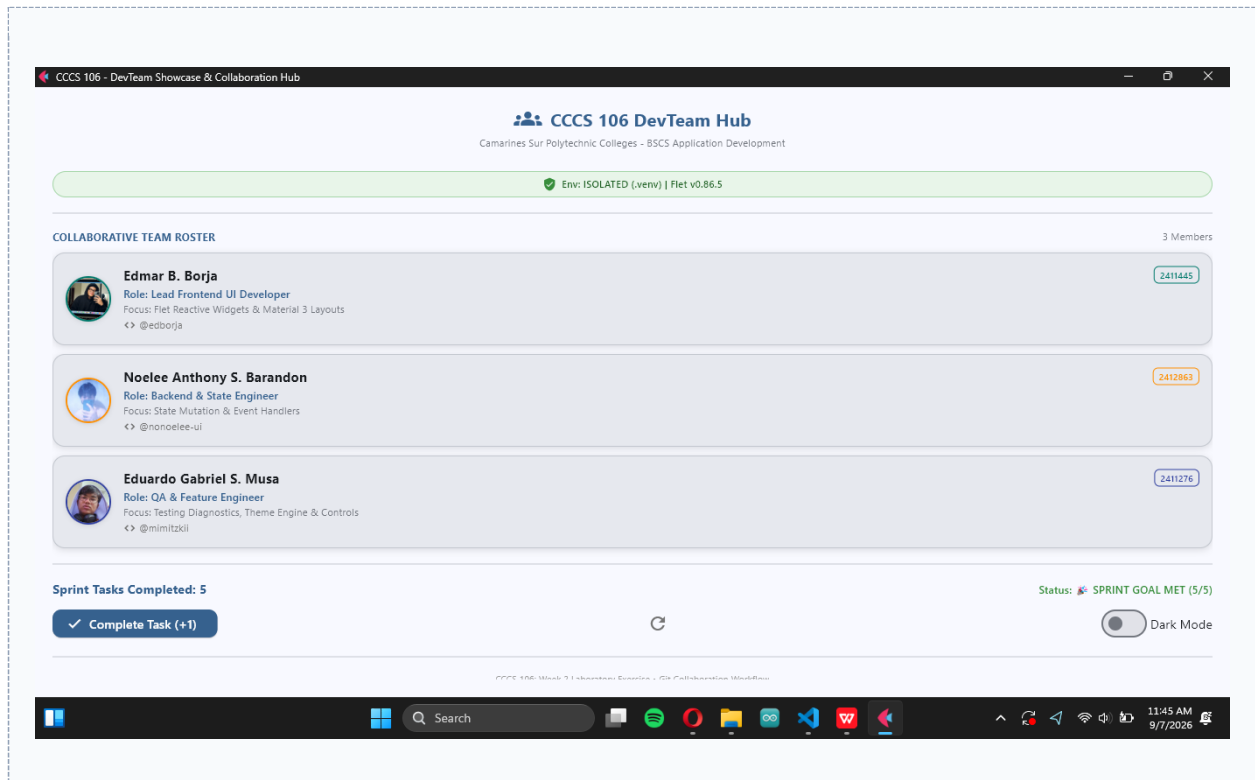

Figure 5: Sprint Goal Milestone Reached State

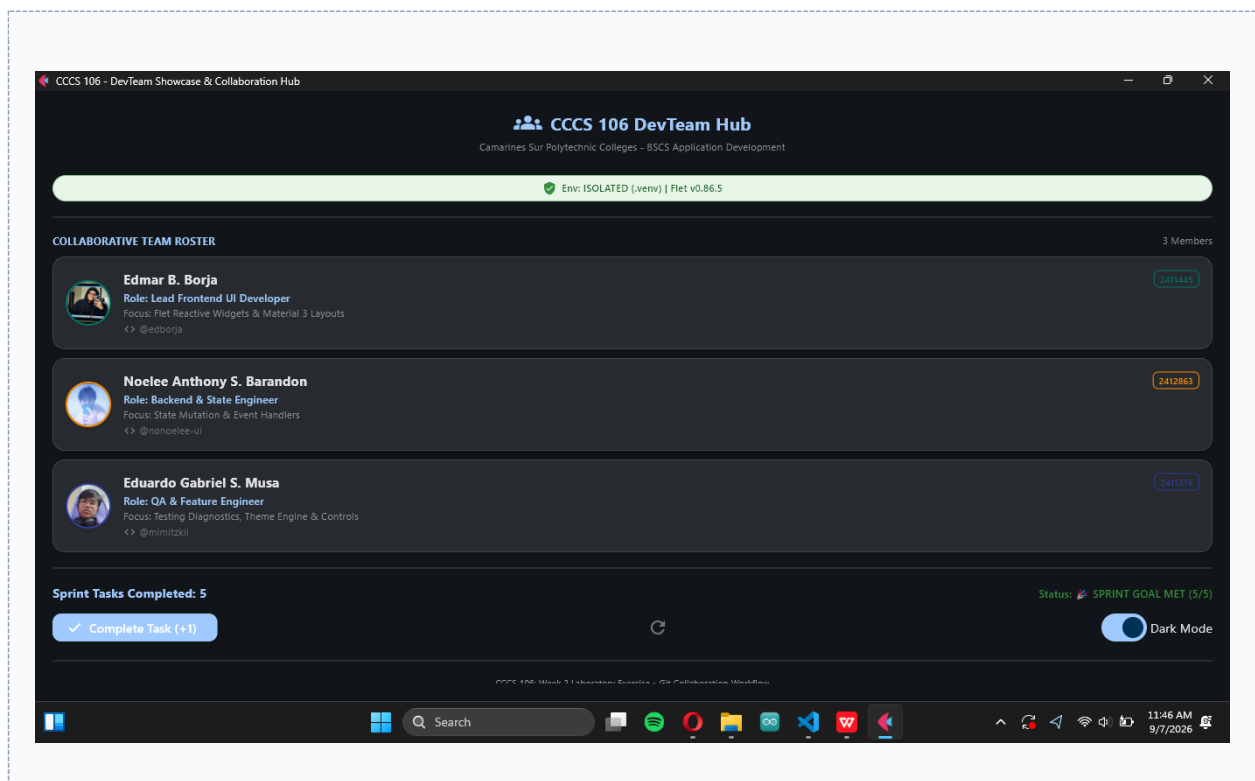

Figure 6: Material 3 Dark Mode Theme Toggle State

Section 5: Triad Contribution Matrix & Learning Reflections

Summary of individual contributions and commit accountability across all three triad developers.

Member Name	Role	Branch Name	Commit SHA	Specific Engineering Contributions
[Borja, Edmar B.]	Developer 1 (Lead UI)	branch	[f08c58a, fe4b95f, 65b1dc5 ed90fe8, 22160dc, 8fd02bc, 1b7062a, 61d7554, e8d6880, 9286b34, 3b962da, 74bc14b]	Initialized repo, setup .gitignore, integrated card 1, configured remote repo & pushed main, dev-1 profile update.
[Barandon, Noelee Anthony S.]	Developer 2 (State Logic)	branch2	[8a11075, 12d6e12, 6436231, 873a2b1, 53a5377, bfea81c, 2366542, edaa510, 3f378e8, 3981b93]	Synced main, integrated card 2, connected increment/reset event handlers, merged & pushed, dev-2 profile update.
[Musa, Eduardo Gabriel S.]	Developer 3 (QA/Feature)	mymitz	[c0cf354, ee577a8, 5f1dcee, 1e38b80, 6ce1b08, 132d036, d242a8f, f6b9514, 69514ff, b1f74fe, 496ecb8, 12111ff, 9989885, 7e5508f, 66fc68d, 62fe7a5, 8e914b3]	Synced main, dev-3 profile update, initial document updates.

Individual Technical Reflections

Developer 1 (Lead UI & Repo Architect):

I learned that virtual environments help keep projects isolated and prevent conflicts between dependencies. I also learned that configuration rules keep the project organized and make sure everyone follows the same setup. For GitHub, I learned how to properly coordinate repository invitations and give the right access to team members. Overall, clear setup and communication make teamwork easier and more efficient.

Developer 2 (State & Event Logic Engineer):

I gained knowledge about cloning our repository so that I would be able to have a local version of our group project on my computer. It has also come to my attention that it is crucial to use git pull origin main to ensure that my files are always updated according to my peers' changes before I start coding. As for the logic component, I gained knowledge about configuring the reactive event handler.

Developer 3 (QA & Sprint Goal Feature Engineer):

I learned how to properly merge two branches properly, how to always pull to avoid conflict when merging. How to update .gitignore, commit properly, and push to the Github repository. I also learn about the naming conventions for committing to Github, I also learn about the workflow in a dev team. I have gained knowledge on what it is mean to become a QA, and how to ensure of the project's quality have met the standard or even exceeded it. I am still learning on various things that is related to Github and the workflow procedure of creating a project.

Appendix: Verbatim Git Commit Tree Log

Verbatim ASCII commit history exported using 'git log --oneline --graph --all > git_log_proof.txt'. This demonstrates the complete sequential feature branching and merge timeline across all three developers.
